Re: PPE

During swabbing for strep, flu, and/or RSV, trash bags must be donned as protection. When doffing trash bag, tear from the neck down and let the bag fall to the ground. Then carefully dispose of in trash can.

Yellow gowns must be used during any visit where COVID is a concern. Once we are out of yellow gowns, then use the trash bags.

The trash bag will be worn in conjunction with goggles and mask.

How to create the head and arm holes:

Have one person hold the bottom of the trash bag on each corner. Another person will take the scissors and cut a small horizontal slit out of the middle. It does not need to be too big because the bag will be pulled down over the head. You want the smallest hole possible to keep it tight around the neck. Repeat on the side of the trash bag for the arms.
